## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-17 are indefinite because it is not clear to the examiner what the applicant is referring to as the detector. Is the detector the same as the shortest path storage circuit? What is the signal propagation time regulator? It appears to the examiner that the signal propagation time regulator refers to the delay circuit in each of the plural paths. However, only the variable delay circuit found in path 403 can be regulated. The remaining delay circuits in path 402 are fixed delays. How is signal propagation time regulated through these paths? What is the input unit? It appears that this corresponds with the nodes. Is this accurate? What is the predetermined input signal that is input to the input node? Is this input node the same as the at least one input node included in the three or more nodes? If so, do all nodes include an input unit and is there more than one predetermined input signal? How is signal propagation direction regulated? Is there a single signal propagation time regulator, input unit, and detector for the

entire circuit? Or is there one for each node? Correction or clarification is required.

***Allowable Subject Matter***

Due to the indefiniteness of claims 1-17 a patentability determination has not been made at this time.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Eleyan et al. Discloses a circuit including plural paths through which signal propagation time is detected and regulated.
